BREXCEL JOE M. ORIAS

SOFTWARE ENGINEER INTERN

Antipolo, Rizal, Philippines | +63 915 463 4639 | brexcel14@gmail.com | github.com/brixcel | brexcel.vercel.app

PROFESSIONAL SUMMARY

Fourth-year Computer Engineering student and current Software Engineer Trainee at Egoist Labs, with hands-on full-stack web development experience using React, JavaScript, TypeScript, Laravel, Node.js, and SQL databases. Experienced in integrating APIs into existing interfaces and building GitHub Actions CI/CD workflows with automated quality gates and preview deployments. Seeking a Software Engineer Internship to contribute to product development while strengthening software engineering fundamentals.

PROFESSIONAL EXPERIENCE

Software Engineer Trainee | Egoist Labs — September 2026 – Present

- Contributed to **2 GitHub Actions deployment workflows** (Learning Platform and Capability Studio), which have recorded **13 subsequent workflow runs** since my changes were merged (Learning Platform: 4; Capability Studio: 9).
- Built the Learning Platform CI/CD workflow from scratch using AI assistance and technical documentation, configuring **5 automated quality gates** (formatting, linting, type checking, tests, and production builds) that run before Cloudflare Pages deployment.
- Extended the Capability Studio deployment workflow started by my mentor, personally implementing **3 deployment paths**: production, development, and feature preview.
- Implemented automatic pull-request-specific preview URLs for Capability Studio so developers can test changes through dedicated preview deployments, and added concurrency controls that cancel outdated runs for the same pull request or branch.
- Created and configured **3 GitHub deployment environments** (production, development, and feature), and set up repository secrets and variables using Cloudflare credentials provided by my mentor.
- Validated the workflows by testing pushes to main and dev, opening pull requests, checking preview deployments, testing failure scenarios, and verifying the deployed applications.
- Integrated a learner API into the Learning Platform React interface using TanStack Query and implemented a batch-selection dropdown to filter learner records *(completed; pending commit)*.

SELECTED PROJECTS

AR-DUINO (Undergraduate Thesis) | 3D Simulation Developer | Live Demo · GitHub · Unity, C#, Vuforia, Blender
Built the 3D circuit simulation for a team augmented reality app that teaches Arduino through guided projects, step-by-step lessons, and AR component cards; wrote **37 C# scripts** covering drag-and-snap breadboard placement, wire-to-pin snapping, circuit validation with a live checklist, and a mock Arduino IDE that uploads code to the simulated board.

SyncTask | Full-Stack Developer | Live Demo · React, TypeScript, Next.js, Node.js, Express, PostgreSQL, Prisma
Built a team task-management app with AI-assisted natural-language task creation, Kanban/list/calendar/analytics views, subtasks, notifications, and a command palette; implemented backend CRUD/API functionality and role- and row-level access controls.

UrsacHub Social | Lead Developer | GitHub · Laravel, PHP, Firebase, JavaScript, Tailwind CSS
Led a five-person team building a campus social platform with feeds, posts, comments, organization pages, authentication, and real-time messaging; primarily developed Laravel routes and backend functionality, with AI-assisted frontend implementation based on a teammate's design.

DSA Workbench | Lead Developer | Live Demo · JavaScript, HTML, CSS
Developed an interactive learning tool used by students to explore eight data structures, including AVL trees, with implemented operations and step-by-step memory and pointer visualizations.

UrsacHub | Front-End Developer | Live Demo · Laravel, PHP, MySQL, Bootstrap, Tailwind CSS
Developed the frontend of a campus platform featuring a merchandise shop, news and events, and a student organization directory as part of a development team.

Photo Booth | Solo Developer | Live Demo · React, Vite, Tailwind CSS, HTML Canvas
Built a browser-based photo booth using camera capture and HTML Canvas to compose 3-, 4-, and 6-photo layouts, add stickers, and export high-resolution images.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, SQL, C#, HTML, CSS
Frontend: React, Next.js, Vite, Tailwind CSS, Bootstrap
Backend & Databases: Node.js, Express, Laravel, PostgreSQL, MySQL, Prisma, Firebase
3D & Game Engines: Unity, Blender
Tools & DevOps: Git, GitHub, GitHub Actions, CI/CD, Cloudflare Pages, Wrangler, Docker, Linux/WSL Ubuntu

EDUCATION

B.S. Computer Engineering | University of Rizal System – Antipolo Campus | Expected May 2027
